 Bedford, Bedfordshire

## FULL STACK DEVELOPER

I am a flexible, well-organized, and highly self-motivated full stack developer who believes that programming is all about communication. I am enthusiastic about what I do and what I am learning, and also get energised by bringing ideas into action. My ultimate ambition is to be a software engineer where I am constantly challenging myself to reach new heights.

## SKILLS

### ★ TOOLS & TECHS

HTML	●	CSS / SASS
JavaScript	●	TypeScript
React.js	●	Next.js
RESTful API	●	Node.js
Express.js	●	PostgreSQL
Jest	●	SuperTest
Auth0	●	Cypress
Git / Github	●	Postman
Heroku	●	Netlify
Figma	●	Trello

### ★ METHODOLOGIES

Agile	●	DevOps
Waterfall	●	TDD
Disney Ideation	●	Pair Programming

### ★ PERSONAL

Organized	●	Communication
Adaptability	●	Time management
Fast Learner	●	Hard Worker

## PROJECTS

### FRIDGEFUL

#### SCHOOL OF CODE

- This app allows you to manage the ingredients in your fridge as well as generate recipes with them. It also helps to create shopping lists based on the ingredients or recipes you have chosen.
- My team, 'Console Loggers', was given 4 weeks to create a full stack app from scratch. We created a fully functioning backend with Node.js, Express.js, and PostgreSQL, incorporating the frontend with React.js, SASS and Auth0, which tested well throughout with Supertest and Jest.
- This project started with the Disney ideation following Agile methodologies. We used Trello/Notion to plan out our initial MVP and kept revisiting it as the project went on. Daily stand-ups and retrospectives kept us on track and we managed to implement stretch goals that were born in the ideation stages
- During the 4 weeks, I was able to experience various roles such as project manager, scrum master and Stack leader which helped me gain an understanding of how team projects will be in a work environment.

### PROJECT TRACKER

#### PERSONAL PROJECT

- I started this project to solidify what I had learnt during my time at The School of Code. This app gives the user an overview of which projects they have completed, which are in progress, and which ones they are yet to start.
- I used Node.js for the backend which I deployed on Heroku, and used React.js and CSS module for the frontend which I deployed on Netlify.
